

Brianne Stewart, Software developer at ArcBest Technologies

Bachelor of science in information systems with a minor in business

She was led to a STEM position because she loves to solve puzzles and her mom suggested programming.

Her favorite high school class was drama class (they mostly just watched movies)

Her favorite college class was computer forensics

Her dream job is to teach others about the wide variety of opportunities in the technology field.

You aren't limited to a certain path just because you're a female. You can absolutely be anything you want to be. If you like solving puzzles then you'll love technology. If you like designing then try engineering. There are so many different careers out there. Talk to others that are in the field you're interested in and ask them what they love about their jobs. When I first became a programmer, I thought it was going to be all nerdy guys. Turns out that's not true. There are other women like myself that you can connect with. Don't let the stigmas that surround certain career scare you. If you're curious about a career, give it a try because you might love it.
